

**CLAIMS**

What is claimed is:

1           1.       A method for facilitating sale of a network-enabled device, comprising  
2   the steps of:  
3           receiving indication of an intent to sell the network-enabled device; and  
4           automatically transmitting a request to a network-based sales service to post a  
5   sale notice that offers the network-enabled device for sale on a network.

1           2.       The method of claim 1, wherein the step of receiving indication of an  
2   intent to sell comprises receiving the indication with the network-enabled device.

1           3.       The method of claim 1, wherein the step of automatically transmitting  
2   a request comprises transmitting information concerning at least one of the network-  
3   enabled device and a seller of the device.

1           4.       The method of claim 3, wherein the information includes at least an  
2   identification of the network-enabled device, a sale price, and contact information of  
3   the seller.

1           5.       The method of claim 3, wherein the information includes use-specific  
2   information as to the manner in which the network-enabled device has been used.

1           6.     The method of claim 1, wherein the step of automatically transmitting  
2     a request comprises transmitting an address that identifies a location of information  
3     pertinent to the network-enabled device.

1           7.     The method of claim 6, wherein the information pertinent to the  
2     network-enabled device comprises a description of the device and its features.

1           8.     The method of claim 6, wherein the information pertinent to the  
2     network-enabled device comprises an image of the device.

1           9.     The method of claim 1, further comprising the step of prompting the  
2     user to select a sales service to post the sale notice.

1           10.    A system for facilitating sale of a network-enabled device, comprising:  
2     means for receiving indication of an intent to sell the network-enabled device;  
3     and  
4     means for facilitating transmission of a request to a network-based sales  
5     service to post a sale notice that offers the network-enabled device for sale on a  
6     network.

1           11.    The system of claim 10, wherein the means for facilitating transmission  
2     of a request comprise means for facilitating transmission of information concerning at  
3     least one of the network-enabled device and a seller of the device.

1           12.    The system of claim 10, wherein the means for facilitating transmission  
2   of a request comprise means for facilitating transmission of an address that identifies a  
3   location of information pertinent to the network-enabled device.

1           13.    A device sale manager stored on a computer-readable medium, the  
2   manager being executable by a network-enabled device, comprising:

3           logic configured to receive an indication of an intent to sell the network-  
4   enabled device; and

5           logic configured to facilitate transmission of a request to a network-based sales  
6   service to post a sale notice that offers the network-enabled device for sale on a  
7   network.

1           14.    The sale manager of claim 13, wherein the logic configured to facilitate  
2   transmission of a request comprises logic configured to facilitate transmission of  
3   information concerning at least one of the network-enabled device and a seller of the  
4   device.

1           15.    The sale manager of claim 14, wherein the information includes at least  
2   an identification of the network-enabled device, a sale price, and contact information  
3   of the seller.

1           16.    The sale manager of claim 14, wherein the information includes use-  
2   specific information as to the manner in which the network-enabled device was used.

1           17.     The sale manager of claim 13, wherein the logic configured to facilitate  
2     transmission of a request comprises logic configured to facilitate transmission of an  
3     address that identifies a location of information pertinent to the network-enabled  
4     device.

1           18.     A network-enabled device, comprising:  
2             a processing device; and  
3             memory including a device sale manager, the sale manager including logic  
4     configured to receive an indication of an intent to sell the network-enabled device, and  
5     logic configured to facilitate transmission of a request to a network-based sales  
6     service to post a sale notice that offers the network-enabled device for sale on a  
7     network.

1           19.     The device of claim 18, wherein the logic configured to facilitate  
2     transmission of a request comprises logic configured to facilitate transmission of  
3     information concerning at least one of the network-enabled device and a seller of the  
4     device.

1           20.     The device of claim 19, wherein the information includes at least an  
2     identification of the network-enabled device, a sale price, and contact information of  
3     the seller.

1           21.     The device of claim 19, wherein the information includes use-specific  
2     information as to the manner in which the network-enabled device was used.

TOTAL 9862007

- 1           22.    The device of claim 18, wherein the logic configured to facilitate
- 2   transmission of a request comprises logic configured to facilitate transmission of an
- 3   address that identifies a location of information pertinent to the network-enabled
- 4   device.
